

## COMPLIANCE SAFE WELCOMES M-PACT ATTENDEES AT BOOTH 905

**Austin, Texas, August 9, 2021** – Compliance Safe will be at M-PACT booth 905 with demos of its award-winning software as a service (SaaS) that allows organizations the ability to monitor, track, and protect business critical documents for organizations. Compliance Safe provides automatic alert notifications to authorized personnel about renewal deadlines, upcoming permits, licenses and contract expirations.

[StrasGlobal](#), the leading provider of convenience retailing contract operations, developed the Compliance Safe SaaS program to eliminate pain points associated with managing the license and permit renewals for their retail operations. Compliance Safe helps reduce time spent keeping up with renewals, lowers costs related to managing and storing documents, and most importantly it minimizes chances of missing deadlines and potential shutdowns with its unique auto-reminder system. The auto-reminder function that is not available with excel systems is the most valuable asset that saves time and stress for any c-store and retail petroleum organization.

"I look forward to visiting with M-PACT attendees at booth 905," says Compliance Safe's Director of New Business Development Tim Haley. "Our 3-minute live demo will show how easy it is to finally replace excel spreadsheets and compliance renewal paper files. Compliance Safe's solution has value for just about any business with time-sensitive document renewals, as well as other business-critical documentation, such as employee training or health-related certifications. *CSP's Retailer Choice Best New Technology Product* and *CIO Review Top 10 Compliance Technology Consulting Service Company* has fully illustrated the ROI benefits for large and small organizations."

According to Compliance Safe CEO Eva Strasburger, "Government and office shutdowns during COVID clearly illustrate the value of having time-sensitive documents stored in the cloud. Companies need to know where their renewal documents are and have them easily accessible. With Compliance Safe cloud-document storage, all authorized people, even those working remotely, know exactly where the renewals are to provide business continuity. Disasters such as hurricanes, floods and fires further

emphasize the need to keep critical documents stored securely in the cloud so they can be accessed anytime, anywhere.”

### **About Compliance Safe**

**Compliance Safe** is a software as a service (SaaS) company that allows organizations the ability to monitor, track, and protect business critical documents for organizations. It provides automatic alert notifications to authorized personnel in the company about renewal deadlines, upcoming permits, licenses and contract expirations that are fast approaching to keep businesses running.
